Summary

Full-stack developer with 8+ years of experience building scalable web apps, developer tools, and decentralized platforms. At Totem Live Accounting, led development across the entire frontend and off-chain backend, designing robust architecture and modular systems. Proven ability to quickly master new technologies such as Python, Golang, AngularJS, and Polkadot, while delivering production-ready features under tight startup constraints.

Education

BEng Software Engineering (First Class with Honours)

[University of Greenwich](#), London, UK (2011-2014)

Final Year Project (Indoor Positioning via WiFi Fingerprinting): Designed and built a proof-of-concept Android app for WiFi fingerprinting and real-time indoor location tracking using signal strength, triangulation, and basic ML via SDKs.

Experience

@superutils - Open Source Developer and Maintainer (Remote)

Jul 2025 - Present

Tech: Typescript, React, RxJS, Vite, Vitest, Vitepress, TypeDoc, Lerna, NPM, CI/CD

- Creator and maintainer of a modern TypeScript utility monorepo delivering practical modules for common application workflows
- Designed, implemented and published multiple [packages](#) with full [documentation](#) and complete test coverage
- Launched the Crowdloan & Pledge DApp, raising \$1+M in the Polkadot Parachain auction and \$83.6K in the pledge round
- Secured & encrypted inter-microservice communication with [TweetNaCl.js](#)
- Authored cross-stack library `common-utils` with Reactive hooks, components, JSON storage & CouchDB helper and form + API data validation library
- Automated CI with GitLab webhooks and custom scripts for source-committed builds and improved release traceability
- Coded and deployed [Totem Live Accounting](#) homepage from design specs
- Architected semi-automated tooling for multilingual support for API & frontend

Community Contributions:

- Boosted user retention, social engagement & bug discovery through gamified rewards engine and responsive onboarding
- Launched and ran the Totem Ambassador Program

- Led multilingual Telegram and Twitter engagement, doubling community engagement and improving support across 6+ language groups
- Provided user support by in-app chat, socials and feature walk-throughs

Demo Of My Work: [Totem.Live DApp](#) | [Crowdloan DApp](#) | [Polkadot Decoded](#)

Podcasts: [Totem Tech Talks](#) | [RelayChain](#) | [Parity & Friends](#)

Open Source: [Totem UI](#), [Message Service](#), [Common Utils](#) and [others](#)

Omniscope, US - Tokenization Developer (Remote)

May 2021 - Jan 2022

Tech: JavaScript, React, Node.js, Firestore, Firebase Functions, NFT, Web3, Stripe API

- Built the tokenization engine for virtual real estate assets
- Integrated Stripe and Web3 payment flows
- Worked on the Virtual Real Estate Map application, a SPA frontend in React, Redux, Firestore and NodeJS backend deployed using Firebase Functions
- Discovered and fixed major security flaws left by ex-dev
- Engineered a NodeJS microservice using queueing and singleton patterns to automate Web3 payments, campaign rewards and tokenization/NFT

Open Source Work & Other Activities

2017 - 2019

- [Halo Info Bot](#): Discord chatbot in Go for the Halo Platform blockchain and masternode/DEX data
- [HaloDEX Chart Feed](#): Real-time TradingView charting data server in Go
- [Cloud Connector](#): Tool for syncing data across AWS S3, GCP, and Azure
- Wrote a [PhD research proposal \(PDF\)](#) on security vulnerability detection in blockchain-based systems (unfunded)
- Ran a small home GPU crypto mining setup during early Ethereum era

The Summit Group, Melbourne, AU - Full Stack Developer

Apr 2016 - Apr 2017

- Enabled recurring direct debits and card payments via Ezidebit API on WHMCS
- SPA admin dashboard for customer billing and invoicing system using AngularJS, deployed with Docker
- Backend API & microservices using Go, MySQL & RabbitMQ
- Programmed automation tools in Go for parsing, formatting and storing telecom provider billing data
- Co-interviewed, helped onboard and mentored an intern

Web123 Pty Ltd, Melbourne, AU - Full Stack Developer

Jul 2015 - Mar 2016

- Worked with the tech lead on **Foxley CMS**, building backend APIs, unit tests (C#/.NET), and UI in AngularJS
- Turned designs into working responsive websites

Certifications

- **Apps for Good** (2012) - MVP development, team leadership, and final presentation at Facebook London HQ. Sponsored by Facebook & others.
- **Red Hat Certified Engineer - RHCE** (2009) - 91.2% test score

Technical Skills

Languages: JavaScript, TypeScript, Python, Golang, C#, PHP

Frontend: React, [Tanstack Table](#), [React Hook Form](#), AngularJS, Redux, [Semantic UI](#), [React](#), [Material UI](#), [Tailwind](#), HTML, CSS, Bootstrap, [Stripe API](#)

Backend: Node.js, [FastAPI](#), Express.js, [TweetNaCl.js](#), [CouchDB](#), Redis, Postgres

Blockchain: [Polkadot/Substrate](#), Web3.js, [Polkadot.js](#), NFT, DApps

Tools: [Vite](#), [Docker](#), [Firebase](#), [Socket.io](#), [RxJS](#), Git, GulpJS, RabbitMQ

Other: REST APIs, Webhooks, Microservices, MVP prototyping, Agile

Additional Info

Languages: English (Fluent) | Bangla (Native)
