Summary

Senior frontend engineer with 8+ years of end-to-end ownership experience - from trading UIs to blockchain DApps to open-source developer tooling. Built and maintained the entire frontend and off-chain backend at Totem as sole developer for 5 years. Creator of @superutils, a TypeScript utility monorepo. Strong in React, TypeScript, real-time systems, and full-stack delivery.

Experience

@superutils - Open Source Developer and Maintainer (Remote)

Jul 2025 - Present

Tech: Typescript, React, RxJS, Vite, Vitest, Vitepress, TypeDoc, Lerna, NPM, CI/CD

- Creator and maintainer of a published TypeScript utility monorepo with [4 packages](#), complete documentation, and full test coverage
- Built a typed fetch wrapper with automatic retries, timeouts, and built-in support for cancellable debounced requests -- eliminating common async boilerplate
- Designed an observable data store built on RxJS for reactive, type-safe state management across both Node and browser environments
- Established consistent API design, strict TypeScript typing, and automated documentation and release pipelines via CI/CD

Nextion, US - Full Stack Developer (Remote)

Feb 2025 - July 2025

Tech: React, TypeScript, Zod, Vite, Tanstack Table, React Hook Form, Python, FastAPI, Postgres, Redis, Interactive Brokers/IB Gateway, RxJS

- Developed a trade approval, re-/execution, and monitoring UI with batch order queuing, powered by Redis-based quant engine and IB gateway
- Fast-tracked Python with AI to ship FastAPI backend using Docker & Postgres
- Enabled analytics by exposing backend metrics, execution states, and historical portfolio snapshots
- Wrote an interactive shell script to set up Postgres with reusable, idempotent schema and automated entry of audit logs using Postgres triggers

Totem Accounting, CH - Co-founder & Lead Developer (Remote)

Mar 2019 - Mar 2024

Tech: JavaScript, React, Node.js, CouchDB, Polkadot.js, Blockchain, Socket.io, Semantic UI React, Material UI, TweetNaCl.js, Stripe API, RxJS

Core Contributions:

- Sole developer of the entire frontend & off-chain Node.js backend
- In-app Blockchain wallet, partner & team management and timekeeping & financial statement viewer
- Marketplace with proposal submission & approval with automated payouts
- Streamlined user onboarding flow with signup, faucet, backup & diff-aware selective restore system and in-app notifications & chat
- Engineered a sequential & resumable on/off-chain transaction queue with history UI for debugging and transparency
- Co-designed and implemented **BONSAI**, an innovative dual on/off-chain proof system using hash anchoring and token-based verification.
- Launched the Crowdloan & Pledge DApp, raising \$1+M in the Polkadot Parachain auction and \$83.6K in the pledge round
- Secured & encrypted inter-microservice communication with [TweetNaCl.js](#)
- Authored cross-stack library `common-utils` with Reactive hooks, components, JSON storage & CouchDB helper and form + API data validation library
- Automated CI with GitLab webhooks and custom scripts for source-committed builds and improved release traceability
- Coded and deployed [Totem Live Accounting](#) homepage from design specs
- Architected semi-automated tooling for multilingual support for API & frontend

Community Contributions:

- Boosted user retention, social engagement & bug discovery through gamified rewards engine and responsive onboarding
- Launched and ran the Totem Ambassador Program
- Led multilingual Telegram and Twitter engagement, doubling community engagement and improving support across 6+ language groups
- Provided user support by in-app chat, socials and feature walk-throughs

Demo Of My Work: [Totem.Live DApp](#) | [Crowdloan DApp](#) | [Polkadot Decoded](#)

Podcasts: [Totem Tech Talks](#) | [RelayChain](#) | [Parity & Friends](#)

Open Source: [Totem UI](#), [Message Service](#), [Common Utils](#) and [others](#)

[Omniscape, US](#) - Tokenization Developer (Remote)

May 2021 - Jan 2022

Tech: JavaScript, React, Node.js, Firestore, Firebase Functions, NFT, Web3, Stripe API

- Built the tokenization engine for virtual real estate assets
- Integrated Stripe and Web3 payment flows
- Worked on the Virtual Real Estate Map application, a SPA frontend in React, Redux, Firestore and NodeJS backend deployed using Firebase Functions
- Discovered and fixed major security flaws left by ex-dev
- Engineered a NodeJS microservice using queueing and singleton patterns to automate Web3 payments, campaign rewards and tokenization/NFT

Open Source Work & Other Activities

2017 - 2019

- [Halo Info Bot](#): Discord chatbot in Go for the Halo Platform blockchain and masternode/DEX data
- [HaloDEX Chart Feed](#): Real-time TradingView charting data server in Go
- [Cloud Connector](#): Tool for syncing data across AWS S3, GCP, and Azure
- Wrote a [PhD research proposal \(PDF\)](#) on security vulnerability detection in blockchain-based systems (unfunded)
- Ran a small home GPU crypto mining setup during early Ethereum era

The Summit Group, Melbourne, AU - Full Stack Developer

Apr 2016 - Apr 2017

- Enabled recurring direct debits and card payments via Ezidebit API on WHMCS
- SPA admin dashboard for customer billing and invoicing system using AngularJS, deployed with Docker
- Backend API & microservices using Go, MySQL & RabbitMQ
- Programmed automation tools in Go for parsing, formatting and storing telecom provider billing data
- Co-interviewed, helped onboard and mentored an intern

Education

BEng Software Engineering (First Class with Honours)

[University of Greenwich](#), London, UK (2011–2014)

Final Year Project (Indoor Positioning via WiFi Fingerprinting): Designed and built a proof-of-concept Android app for WiFi fingerprinting and real-time indoor location tracking using signal strength, triangulation, and basic ML via SDKs.

Certifications

- **Red Hat Certified Engineer - RHCE** (2009) - 91.2% test score
- [Apps for Good](#) (2012) - MVP development, team leadership, and final presentation at Facebook London HQ. Sponsored by Facebook & others.

Technical Skills

Languages: JavaScript, TypeScript, Python, Golang, C#, PHP

Frontend: React, [Tanstack Table](#), [React Hook Form](#), AngularJS, Redux, [Semantic UI React](#), [Material UI](#), [Tailwind](#), HTML, CSS, Bootstrap, [Stripe API](#)

Backend: Node.js, [FastAPI](#), Express.js, [TweetNaCl.js](#), [CouchDB](#), Redis, Postgres

Blockchain: [Polkadot/Substrate](#), Web3.js, [Polkadot.js](#), NFT, DApps

Tools: [Vite](#), [Docker](#), [Firebase](#), [Socket.io](#), [RxJS](#), Git, GulpJS, RabbitMQ

Other: REST APIs, Webhooks, Microservices, MVP prototyping, Agile

Additional Info

Languages: English (Fluent) | Bangla (Native)
